HYDRAULIC SIDE-SHIFT ROTARY CULTIVATOR WITH CHAIN DRIVE

The S1P series rotary cultivators are machines with chain drive and hydraulic shift, that can be activated by the driving seat of the tractor. They're able to work the soil both in centered and in decentralised position with regard to the central axis of the tractor, and are ideal to work in fruit-farms, vineyards and in general in all farmings that need a lane soil working in areas difficult to be reached. They should be used with small tractors having a power between 20 and 50 hp and are provided, on demand, with front or side saddles.
